

Secondary Education and Professional Training

Activity

THEATRE: another way to promote the recycling of materials

OBJECTIVES

- To use artistic expression and creativity as a tool to work on sustainability in education
- To take advantage of the analysis of the environment and the various processes to develop the capacity to create and communicate

MATERIALS

- Data sheet for writing history
- Data sheet for writing the script
- Data sheet for completing the critique
- Materials used in the theatre play (costumes...)

SKILLS DEVELOPED

- Scientific, technological and health culture.
 - Learn to learn.
 - Linguistic communication.
- Processing information and digital competence.
 - Social aspects and citizenship
 - Autonomy and personal initiative

DEVELOPMENT:

To carry out the proposal, it is recommended to work jointly the areas of language and Graphic and plastic expression.

A) Theme Recycling (in the area of Language, the student will draft or select a story)

1. Discussing the problems of the environment we will explain that a new theatre group is going to be created. All the materials that will be used will be reused and/or recycled.
2. In one of the subjects (Basque, Spanish Language or English) groups of 3-4 people will be created and each one will write up a story related to recycling (it is possible to choose another theme).
3. After one member from each group explains the story to the class, the best

story will be chosen democratically in order to go on to preparing the script.

4. Distribution of work
 - A director will be chosen, who will coordinate the different groups.
 - Group of actors and actresses.
 - Script-writing team

B) Recycling left-over materials we will build the set (plastic / technology)

5. Distribution of the work of plastics/ technology:
 - Stage hands: responsible for decoration/ stage
 - Persons responsible for costumes
6. Finally, after the relevant rehearsals, we will present the play in front of the students in other courses
